JAYASHREE T	(611420104026)
NANDHINEESWARI D	(611420104047)

COLLEGE SPOC

MANIMEGALAI M , M.E

FACULTY MENTOR

KOWSALYA N , M.E

PERMISSION SETS

A permission set is a collection of settings and permissions that give users access to various tools and functions. Permission sets extend users' functional access without changing their profiles. Users can have only one profile but, depending on the Salesforce edition, they can have multiple permission sets.

Use Case:

Every day is a war for Admin with some unique challenges. A new challenge awaits as you enter the office. After you arrive in office you came to know that the manger is on leave and there's a lot work pending at his desk generally there are numbers of employee records that the manager have to enter in the salesforce org and no other person have the permission to create those records except him and your CEO wants it to be done by the end of the day, as it's not possible to create the same profile and assigned it to some other person in the org. So using your admin knowledge you came up with the idea to create a permission set and assign it to someone who doesn't have the access to do that job. Let's create a permission set.
